

## COMPUTER EXPLORERS Teaches Global Technology Education Skills

What does foreign language mean to you? Is it Spanish or French? Maybe it's German or even English. For many, these forms of traditional foreign language are issues of the past. Learning and using technology and computer skills to communicate across the globe are the modern foreign language trends of today.

New technologies such as podcasting, blogging, and Web design are not only fun activities for children to engage in on their computers, but also are international means of communication and are accessible from anywhere in the world through the Internet.

COMPUTER EXPLORERS provides opportunities for quality technology education in both the United States and abroad. Educating and exciting students about technology brings different cultures together and makes the world a much smaller place for children.

“Technology enables people from all over the world to interact through countless communication outlets,” says Diane Taylor, development director of ComputerXplorers\*, England. “If children are introduced to even basic computer skills, they receive a solid foundation that enables them to embrace opportunities across the globe.”

Through their Web design program, ComputerXplorers even helped a foreign exchange student communicate with her family in Nepal. Franchisees assisted the student in building her own Web site and taught her about Internet programs and safety. She soon shared news and stories with her family and friends across the world.

Technology education programs like COMPUTER EXPLORERS, opens the door for students to learn and grow through technology, ensuring each child takes the right path towards a successful future. Whether your foreign languages are Chinese, Portuguese, or English, COMPUTER EXPLORERS programs allow students to cross international barriers and communicate across the world through technology.

*\* While the trademark names are different, ComputerXplorers in the United Kingdom and COMPUTER EXPLORERS in the United States are the same organization and offer the same programs.*
